

ABSTRACT OF THE DISCLOSURE

In the light of the present situation of other services than medical and care jobs presented to the inpatients, inhabitants and users in hospital, nursing home and other institutes, it is intended to present an information service system capable of improving and expanding both quality and quantity of available services. The system comprises a terminal having a display screen including touch panel type input means disposed as an input and output terminal 7 in each patient room 2 or waiting room 3 at hospital, nursing home or other institute, terminal 11 to 13 as input and output means connected to the input and output terminal 7 for handling input information from the terminal 7 and output information to the terminal 7, and server computers 9, 10 connected to external information sources 15 to 17 through a communication network 16 such as the Internet, in which information such as broadcast and other video and audio data, guide data relating to medical and care jobs, pulse rate and other measurement data, supplies and other order data, interview data, meal menu selection data, and drug retrieval data can be exchanged between the terminals 7, 11 to 13 and the server computers 9, 10.
